

OPERATION 50/50: WOMEN'S PERSPECTIVES SAVE LIVES

Join us in demanding representation
in global health security

90+ WOMEN EXPERTS WORKING IN HEALTH SECURITY

Gender equality makes global health stronger. Join [Women in Global Health](#) and [Women of Color Advancing Peace and Security](#) in supporting equitable representation in global health security decision-making. Use this roster

Representation matters. As outbreaks and epidemics continue to remind us, women face greater risks because they are the majority of frontline health workers, are typically the primary caregivers of the sick, and have greater socioeconomic vulnerability. Yet, few women are included in health security decision-making or quoted in the media. In January 2020, just five women were invited to join the WHO Emergency Committee on COVID-19, making up less than a quarter of the 21-member group. And a recent presidential tweet showed the inaugural U.S. Coronavirus Task Force was comprised entirely of men.

3:1 Ratio (men:women) quoted
in media in the past month in
response to #COVID19

In failing to give women a seat at the decision-making table, governments and international agencies trying to solve crises like COVID-19:

1) miss out on critical expertise because they aren't leveraging the entire global health security talent pool

2) miss out on the gender dimensions of health emergencies, including the role of women in health care provision, the differences in disease transmission and outcomes between the sexes, and gender-based disparities in the way the sick seek medical care

3) are more likely to overlook the wider consequences of epidemics on reproductive, maternal and child health, such as lack of access to maternal and neonatal care, feminine hygiene products and contraception products

4) miss out on leveraging the vast networks of women in affected countries who are part of the solution to containing the virus.

[Women in Global Health](#) and [Women of Color Advancing Peace and Security](#) are working to change this disconnect between vulnerability and representation in health security. This roster of expert women includes those who are working to strengthen global, regional, national, and local capacities to prevent, detect, and respond to outbreaks.

The voices of diverse women experts add value to any global health security decision-making body, as well as to media coverage of emerging threats such as COVID-19.

OUR ROSTER OF WOMEN HEALTH SECURITY EXPERTS REPRESENTS A DIVERSE GROUP OF TALENTED WOMEN

- Experts are drawn from all over the world, and specialize in a variety of security-related global health fields
- Over thirty countries are represented, from all regions of the world
- Over a quarter self-identify as Women of Color.

Operation 50/50 nominations are accepted on a rolling basis and this list will be regularly updated – at womeningh.org. Are you a woman working in health security or do you know another woman working in this space? Are you a man with female colleagues you want to elevate?

NOMINATE HERE: <http://bit.ly/WGHSecurity>
